

anewgreen™
PACS JUST DROP TO PLANT™

Anew Green is looking to partner with reclamation companies, mining operations and government agencies as a means to provide a new technique of land recovery. We produce Seed Pacs for specific soil types with seeds native to the area. Some example applications are oil well pad restoration, forest fire reseeding, roadway soil reclamation and beautification, slope stabilization, erosion control and soil PH balancing. We can help reduce costs while providing increased potential for long term success.

Without Seed Pacs

With Seed Pacs

Benefits

- Increased germination success -> Less wasted seed
- Increased plant growth and vigor -> Faster plant establishment
- Single application -> Reduced costs
- Site specific composition -> Better outcomes
- Reduced post weed treatment -> Reduced maintenance

Patent Pending
