Seed Pacs

HELP SAVE THE BUTTERFLIES!

A major threat to butterflies is habitat change and loss due to residential, commercial and agricultural development. Introducing Anew Green Seed Pacs for planting made easy! Many of the plants butterflies prefer most are part of this all-inclusive, non-GMO and neonic free Seed Pac mixture. These Seed Pacs are great for planter pots and flower gardens, or toss randomly and let rain handle the rest. This one small step can really help butterflies reestablish their population.

Just place a Pac where plant growth is desired, water and watch the outer Pac dissolve. The nutrients inside provide the seeds the best opportunity to grow in a variety of soil conditions.
