

anewgreen™ Seed Pacs

HELP SAVE THE POLLINATORS!

The biggest threats to birds, bees and other pollinators are pesticide use and habitat change. Introducing Anew Green Seed Pacs, an all-inclusive, non-GMO and neonicotinoid free mixture for planting made easy! These Seed Pacs are great for planter pots and flower gardens, or toss randomly and let rain handle the rest. This one small step can really help our world's pollinators reestablish their populations.

Just place a Pac where plant growth is desired, water and watch the outer Pac dissolve. The nutrients inside provide the seeds the best opportunity to grow in a variety of soil conditions.
